

Icespy System 5 - new standards in temperature and humidity monitoring

System 5 takes full advantage of the latest radio technology to provide cost effective radio transmitted monitoring of temperature and humidity.

Ideal for multiple measurement points across any size of site in:

- The food industry – production, processing, catering and retail
- The pharmaceutical industry – manufacture, storage and distribution
- Laboratories – fridges, freezers and cold rooms
- Building management and environmental monitoring
- Horticulture and animal husbandry

Easily networked, the modular design of System 5 provides the flexibility to adapt and extend installations.

The range of communication options available offers comprehensive alarm management with the choice of sending alarm indications by email or text.

Software takes new food and pharmaceutical standards and regulations into account, aiding compliance with EU requirements and 21CFR Part 11.

On-site service and UKAS calibration available – see page 22.
